*South Dakota's State Historic Preservation Office classifies all projects as Rehabilitation. The Preservation and Restoration standards are provided for further reference.

**Additions and New Construction must also must meet South Dakota Administrative Rules (ARSD) 24:52:07:04

+ Adjacent or contiguous properties may be considered within the environs of an historic district and therefore may be subject to 11.1 Review. Therefore, all new construction, addition, demolition, structure relocation, and street/alley vacation projects on properties that are adjacent or contiguous to an historic district must be submitted for a determination of whether an 11.1 Review is required.

++Structural Systems are defined as the load bearing components of the building. They can be plain or decorated and include masonry bearing walls, horizontal steel beams or lintels above storefronts, and wood or steel columns.

+++Paving Routine Maintenance is defined as patching, overlays, or other work that does not require replacement of curbs and/or gutters, or work that would change lane widths, or include other reconstruction.

++++ Applicable only when new hardware is used to install signage which may affect the building façade.
